

X-Force Digitalization

DoW-Digitization of Work

Overview

X-Force DoW helps industries transition from manual to digital workflows across operations, maintenance, safety, and HSE procedures. It streamlines and standardizes tasks for improved efficiency and compliance. Industries like Oil & Gas, Power, Steel, Energy, and Food & Beverage benefit significantly. This digital transformation enhances visibility, accountability, and performance across all departments.

Value Delivered with X-Force DoW

Cost Saving

Paper cost saves 50,000 – 1,00,000 Rs annually in Pipelines Operations by eliminating paper-based logs.

Men hours(Manual Entry, Data Retrieval, Report generation and Audit preparation) saves **50,000to 1,00,000 Rs per annum.**

Resource Savings

Digitalization of Oil Pipeline Operations saved 20 to 25% Manhours per day in reporting, communication &co-ordination.

Leading Metal Industry saved **10000+ Man hours per year** by data centralization & reporting.

Elimination of paper logbooks in Pipelines Operations helps in saving of 1 - 2 Tonne Paper per year.

Decision Making

Increases decision-making speed by 20-30% due to real-time analytics and dashboards.

Early deviation detection can reduce potential losses from unnoticed issues by up to **10 to15**% annually.

Productivity

Increase work force productivity by 5-10% by eliminating redundant tasks. Improves communication efficiency by 10-15%through centralized data access.

X- Force DoW - Modules

X-Force Customized Module

Digitalization of Calibration, Safety suite, Batch Management, Inventory management etc

Shift Operations Module

Digitalization of Shift handovertakeover process, shift logbooks, digital management of shift ROTA

Permit to Work

Digitalization of permit and workflow for status tracking, compliance and confirmation with history analysis

E-Logbook

Digitalization of field operator logbooks and control room log sheets

Maintenance

Digitalization of maintenance checklists with scheduling, tracking and reporting for all maintenance activities

Incident Reporting

Digitalization of incident reporting, near miss reporting, visual inspection / housekeeping / audit checklists

Management of Change

Digitalization of change management process with timeline tracking, history review along with workflow for review and approve

E - Logbook Module

Shift Operations Module

Shift Operations Module compiles data from various forms, logsheets, checklists and provides shift summary report providing composite view of previous shift operations to incoming supervisor / operator engineers during shift handover. These reports help incoming users to understand plant situation & plan operations for upcoming shift.

- · Overview of operations status, HSE incidents, Work Permits, change management status, any abnormal operations etc.
- Integrate with X-Force Alarm Management to get snapshot of standing alarms & their status and other Alarm analysis.
- Special operational instruction received from management.
- Equipment status and on-going/scheduled Maintenance Activities.
- Each handover-takeover is secured with digital signature of both parties.
- Notification to relevant stakeholders about acceptance.

Permit to Wok Module

- Realtime permit notification to respective stakeholders
- Realtime notifications and tracking for permit activities, requests and approvals
- Tracking of each permits
- Digital signatures and approvals
- Integration with existing systems (e.g., SCADA, ERP)
- Monitoring dashboards and reports for real-time and historical analysis.

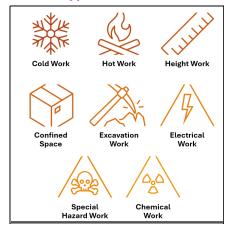

Incident Reporting Module

Incident and near miss reporting is a very important safety-related activity. Manual reporting of such activities can cause delays in action.

Incident Reporting Module provides a solution for every plant user to report incidents and near misses. Issues are reported with specific location/equipment. Each report can be categorized into different types of incidents or near misses, such as:

Positive Observations. Unsafe Acts. Near Miss. Minor Injuries, Lost Time Injuries. Fatalities. Fire Hazard

Types of Permits

Equipment Tag No.	Equipment Name	Running Status	T No Leakage	Oii Level	Cooling fluid in line	T Insulation Available	ন Guard/ Cover available	Coupling OK	T Wiring-Elec. & Inst. OK	© Earthing OK	ات Gauges are clean and working	Nuts/Bolts OK	No Spillage	No Abnormal Sound (motor, line, pump)	No Abnormal Sound Cavitation sound)	No Abnormal Sound (Hissing sound)	No Vibration	Temperature Normal	No Uneassiness (Smell, irritation)
	Shift A																		
53A -101.04	11AT-62093 PH Analyzer for EFFL TRF Pump		NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA
16P-9751-01	Corrosion Inhibitor Pump A		NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA	NA

Management of Change Module

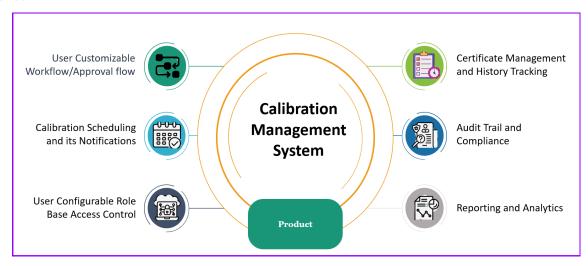

- · Any Stakeholders can generate MoC.
- Predefined workflow for MoC approvals.
- · Real time monitoring of MoC Status.
- Update SOPs / Forms once MoC is implemented.
- · Maintain Documentation related to MoC.

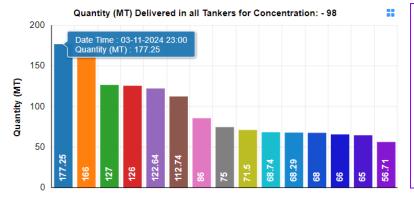

Calibration Management System

Calibration ensures that instruments and equipment operate within defined accuracy limits. A Calibration Management System streamlines the process by efficiently tracking, scheduling, documenting, and reporting calibration activities. Manual calibration methods often lead to missed schedules, incomplete records, human errors, and increased risk of non-compliance. Additionally, they lack real-time visibility into asset status, making manual tracking time-consuming and unreliable
